

Lymphoma Coalition 2020 Global Patient Survey on Lymphomas & CLL

11,878 responded to the survey, providing insight into the experiences of patients with lymphoma, including CLL, and their caregivers. The results will be used to drive action planning and support.

Some key highlights from the patient survey include:

Only **32%** agreed strongly that they had good conversations with their doctor about care and treatment plans.

Only **40%** were informed and completely understood how to manage side effects of treatment.

52% were definitely involved as much as they wanted to be in decisions about their care and treatment.

58% of patients reported they needed more information about treatment options.

60% reported that their treatment side effects had negatively impacted on everyday activities that people their age can usually do.

The highest quality person centred care for all, always.
